Chapter 1 - Product Overview

Package Contents

The following items are included in your AirStation package. If any of the items are missing, please contact your vender.

- WZR-D1800H 1
- AirStation Setup Card 1
- AC adapter 1
- Stands..... 2
- Screws for wall-mounting 2
- LAN cable 1
- AirNavigator CD..... 1
- Quick Setup Guide..... 1
- Warranty Statement 1

Hardware Overview

Front Panel LEDs

- 1 AOSS button** To initiate AOSS, hold down this button until the Wireless LED flashes (about 1 second). Then, push or click the AOSS button on your wireless client device to complete the connection. Both devices must be powered on for this to work.
- 2 Wireless LED (Blue or Amber)**
- | | |
|------------------------|--|
| On: | Wireless LAN is enabled. |
| Randomly blinking: | Wireless LAN is transmitting. |
| 2 blinks: | AirStation is waiting for an AOSS or WPS security key. |
| Continuously blinking: | AOSS/WPS error; failed to exchange security keys. |
| Off: | Wireless LAN is disabled. |
- Note:
- | | |
|-----------------------|--|
| Wireless LED is blue | : Security settings have been made for the wireless LAN. |
| Wireless LED is amber | : Security settings have not been made for the wireless LAN. |

3 Internet access LED (Blue)

On:	Internet access is available.
Off:	Internet access is not available. Router functionality is disabled.

4 Router LED (Blue)

On:	Router functionality is enabled.
Off:	Router functionality is disabled.

5 Buffalo LED (White or Red)

On (White):	Power is on.
Off:	Power is off.
On (Red)*1:	Booting.
2 blinks (Red)*2:	Flash ROM error.
3 blinks (Red)*2:	Wired Ethernet LAN error.
4 blinks (Red)*2:	Wireless LAN error.
5 blinks (Red)*3:	IP address setting error.
9 blinks (Red)*2:	System error.
Continuously blinking*1:	Updating firmware, saving settings, or initializing settings.

*1 Never unplug the AC adapter while the Buffalo LED is blinking continuously.

*2 Turn off AirStation first, wait for a few seconds, then turn it back on.

*3 Because the network addresses of both the Internet port (WAN port) and the LAN port are the same, it is not possible to establish communication. Change the LAN side IP address of the AirStation.

Back Panel

- 6 Router button** This button turns the router on and off. The operation mode is changed by holding down the button.
- 7 USB LED (Blue)**
- On: The USB drive is connected.
- Blinking: The USB drive can be removed.
- Note: When this LED is blinking, the connected USB drive cannot be used. Remove the connected USB drive. If the LED continues to blink even after the USB drive is removed, restart the AirStation. Do not remove the USB drive or turn off the AirStation while the USB LED is on.
- 8 USB Eject button** To dismount a USB hard drive, hold down this button until the USB LED flashes (about 3 seconds). The USB drive can then be unplugged safely.
- 9 USB Port** Connect the USB drive.

10 LAN Port Connect your computer, hub, or other Ethernet devices to these ports. This switching hub supports 10 Mbps, 100 Mbps, and 1000 Mbps connections.

11 Internet Port 10 Mbps, 100 Mbps, and 1000 Mbps connections are supported.
Note: In bridge/AP mode (router off), the Internet port becomes a regular LAN port, for a total of 5 usable LAN ports.

12 LAN LED (Green)

On: An Ethernet device is connected.
Blinking: An Ethernet device is communicating.

13 Internet LED (Green)

On: The Internet port is connected.
Blinking: The Internet port is transmitting data.

14 Power button This button turns the power on and off.

15 DC connector Connect the included AC adapter here.

Bottom

16 Reset button To reset all settings, hold down this button until the Buffalo LED turns red (about 3 seconds). The power must be on for this to work.

17 Setup card slot This is the slot where the AirStation setup card is stored. The initial settings for the username, password, SSID, and encryption type are provided on the card for logging into the configuration interface.

Right Side

18 Mounting holes

Mounting holes are provided for mounting the AirStation to a wall. Use the supplied screws in the holes to mount to a wall.

Vertical Placement

Attach the stand as shown in the figure below.

Horizontal Placement

The same stand also allows horizontal placement. Install the stand as shown in the figure below.

Wall-Mounting

Install with the supplied screws in the mounting holes of the AirStation as shown in the figure below.

Chapter 2 - Installation

Initial Setup

To configure your AirStation, follow the procedure below.

- 1** Verify that you can connect to the internet without the AirStation, then turn off your modem and computer.

- 2**  Unplug the LAN cable which connects your computer and modem.

- 3** Plug one end of the LAN cable into your modem and the other end to the AirStation's Internet (WAN) port. Turn on the modem.

4 Turn on the AirStation, then wait one minute.

5 If using a wired LAN, connect the AirStation LAN port and computer using a LAN cable.
If using a wireless LAN, connect the computer to the wireless LAN by referring to Chapter 4.

6 Once your computer has booted, the AirStation's LEDs should be lit as described below:

Wireless	On or blinking.
Internet access	On.
Router	On.
Buffalo	White light on.
LAN	Green light on or blinking.
Internet	Green light on or blinking.

For LED locations, refer to chapter 1.

Note: If the router LED is not lit, hold down the router button for about 3 seconds to switch to router mode.

- 7** Launch a web browser. If the home screen is displayed, setup is complete. If username and password fields are displayed, enter “admin” for the username and “password” for the password, then click [OK]. Step through the wizard to complete setup.

You’ve completed the initial setup of your AirStation. Refer to Chapter 3 for advanced settings.

Chapter 3 - Configuration

The web-based configuration tool lets you change advanced settings for the AirStation. Don't change these settings unless you know what you're doing.

Accessing the Web-based Configuration Interface

To configure the AirStation's advanced settings manually, log in to the web-based configuration interface as shown below.

1 Launch a web browser.

2

Enter the AirStation's LAN-side IP address in the address field and press the Enter key.

Note: The AirStation's default LAN-side IP address depends on the mode.

In router mode: 192.168.11.1

In bridge mode: 192.168.11.100

If you changed the IP address of the AirStation, then use the new IP address.

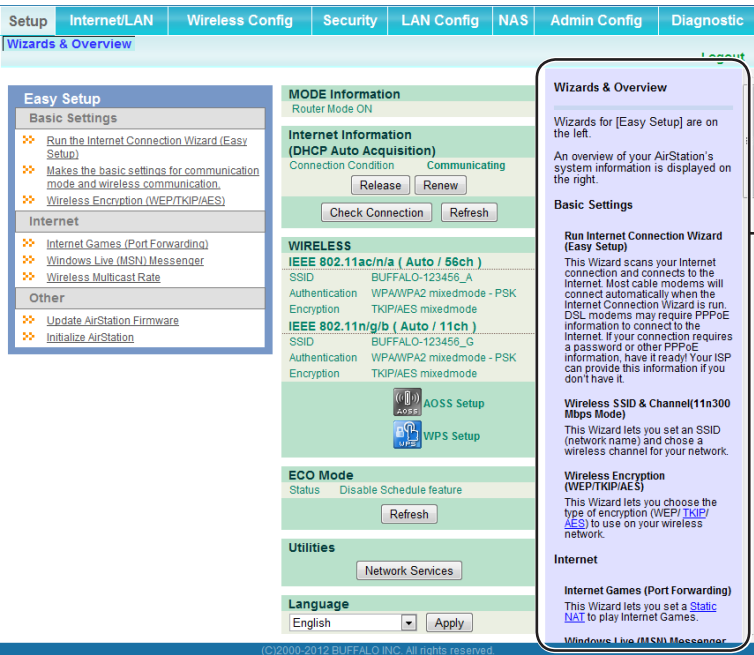

3

Enter "admin" for the username and "password" for the password and click [OK].

Note: If you forget your password, hold down the Reset button (page 9) to initialize all settings. Note that all other settings will also revert to their default values.

4

This is the configuration interface, where most AirStation settings can be configured.

Help is always displayed on the right side of each screen. Refer to the help screens for more information on using the configuration interface.

Configuration Interface Menus in Router Mode

The menu structure for the AirStation in router mode is as follows. Please refer to the pages listed at right for explanations of each item.

Main screen	Descriptions	Page

Click this to log out of the AirStation's configuration interface.		

Setup

Setup is the home page of the configuration interface. You can verify settings and the status of the AirStation here.

Parameter	Meaning
Internet/LAN (LAN Config)	Displays the configuration screen for the Internet port and LAN ports.
Wireless Config	Click this button to display the configuration screen for wireless settings.
Security	Click this button to display the configuration screen for security.

Parameter	Meaning
LAN Config	Click this button to display the configuration screen to open ports for games and applications.
NAS	Click this button to display the configuration screen for NAS settings.
Admin Config	Click this button to display the configuration screen for administration settings.
Diagnostic	Click this button to display the status of the AirStation.
Easy Setup	Enables you to easily configure the AirStation's network settings automatically.
MODE Information	This indicates the operation mode of the AirStation.
Internet Information	Displays WAN-side system information for the AirStation.
Check Connection	Click this button to check if the AirStation is connected to the Internet properly.
Refresh	Click this button to refresh the current screen.
WIRELESS	Displays the current wireless settings.
AOSS Setup	Click this button to display the AOSS configuration screen.
WPS Setup	Click this button to display the WPS configuration screen.
ECO Mode	This indicates the operating status of ECO Mode.
Network Services	Displays the list of the network devices for which information is provided from the network on the LAN-side.
Media Server	Displays the status of the media server.
Download Manager	Displays the list of BitTorrent files downloading.
Language	Enables you to select the language you use.
Logout	Log out of the configuration interface. If the AirStation does not communicate for 5 minutes, it will log out automatically.

Internet Ethernet Settings

Configuring your [Internet](#) side port:
Normally, you'll connect the [Internet](#) side port to an external network such as the internet.

Method of Acquiring IP Address

Select one of the following methods to acquire an [INTERNET](#) port [IP Address](#). Please ask your [Provider](#) for any other information about your line format. If you're not sure which method to choose, try selecting Easy Setup. You can confirm the status of the current [Internet](#) side [IP Address](#) on the System Information screen.

Perform Easy Setup (Internet Connection Wizard)

The Easy Setup scans your [Internet](#) connection and determines your internet connection type. The correct setup wizard for your internet connection is then activated automatically.

Note:

- Auto line determination [Easy Setup] is effective only for a line

(C)2000-2012 BUFFALO INC. All rights reserved.

Parameter	Meaning
Method of Acquiring IP Address	Specify how the WAN-side IP address is obtained.
Default Gateway	Configure an IP address for the default gateway.
DNS Name Server Address	Specify an IP address for the DNS server.
Internet MAC Address	Configure the Internet side MAC address. Note: Configuring an improper MAC address may make the AirStation unusable. Change this setting at your own risk.
MTU size of Internet Port	Configure the MTU value of the Internet port. Values of 578 to 1500 bytes may be entered.

PPPoE (Router Mode only)

Configure PPPoE settings.

PPPoE Settings

If PPPoE is specified in the [Internet](#) side configuration, you'll have more detailed setup options on this page. To specify PPPoE as the [Internet](#) side communication method, on [Internet Setup]-[Internet Port], select [PPPoE Client Function] or select [Use IP Unnumbered] .

Note:
If [Acquire IP address automatically from DHCP server] or [Manual Setup] is set as the [Internet](#) side communication method, or if something besides PPPoE was detected when [Easy Setup] ran, it is not necessary to enter information on this page. (Even if it is set, it is not used.) Additionally, when [Easy Setup] is executed, information set on this page may be rewritten.

Default PPPoE Connection

(C)2000-2012 BUFFALO INC. All rights reserved.

Parameter	Meaning
Default PPPoE Connection	If you have registered multiple connection destinations in the PPPoE Connection List, connection destinations selected here have priority. You need to configure the route to which PPPoE is connected to if you don't use the default settings.
IP Unnumbered PPPoE Connection	Select the destination from the PPPoE Connection List which is used when "Use IP Unnumbered" is chosen for the Method of Acquiring IP Address (page 24).
PPPoE Connection List	Edit PPPoE destination. You can register up to 5 sessions.
[Edit Connection List]	Click this button to edit destination settings.

Parameter	Meaning
PPPoE Connection No.*-Add	<p>This is displayed when [Edit Connection List] is clicked.</p> <p>Name of Connection Enter the name to identify the connected destination. You may enter up to 32 alphanumerical characters and symbols.</p> <p>Username Enter the username specified by your ISP for PPPoE certification. You may enter up to 64 alphanumerical characters and symbols.</p> <p>Password Enter the password specified by your ISP for PPPoE certification. You may enter up to 64 alphanumerical characters and symbols.</p> <p>Service Name Fill in this field only if your ISP specifies a Service Name. Leave blank otherwise. You may enter up to 64 alphanumerical characters and symbols.</p> <p>Connection Type Specifies the timing for the AirStation to connect to your provider.</p> <p>Automatic disconnection Set time to disconnect after communication is stopped when the connection method is set to [Connection on Demand] or [Manual]. You can enter up to 1440 minutes.</p> <p>Authorization Configure an authorization method with a provider.</p> <p>MTU Size Configure the MTU size for PPPoE. Values of 578 to 1492 bytes may be entered.</p> <p>MRU Size Configure MRU (Maximum Receive Unit) for PPPoE. Values of 578 to 1492 may be entered.</p>

Parameter	Meaning
PPPoE Connection No. *-Add	Keep Alive If Keep Alive is enabled, then the AirStation will issue an LCP echo request once a minute in order to maintain the connection with the PPPoE. If the server does not respond for more than 6 minutes, the line is recognized as disconnected and the AirStation will terminate the connection. [Disabled] is the recommended setting.
Preferred Connections	Displays information you have set regarding to the connection destination route.
[Edit Preferred Connections]	Click to edit the connection destination route settings.
Preferred PPPoE Connection -Add	Click [Edit Preferred Connections] to display. Name The destination to connect by PPPoE if [Destination address] and [Source address] match. Select the destination registered to the PPPoE Connection List. Destination address When communicating to this address, the AirStation will communicate with [Name of Connection.] Source address When communicating from this address, the AirStation will communicate with [Name of Connection.]

DDNS (Router Mode only)

Dynamic DNS Setup.
Before configuring this settings,
you need to sign up for a dynamic
DNS service provider.

Dynamic DNS Service
Select a dynamic DNS service
provider.
You can select "DynDNS" or
"TZO".

- DynDNS
- TZO

The following values are different.

(C)2000-2012 BUFFALO INC. All rights reserved.

Parameter	Meaning
Dynamic DNS Service	Select a provider (DynDNS or TZO) for Dynamic DNS.
Username	Enter the Dynamic DNS username. You may enter up to 64 alphanumerical characters and symbols.
Password	Enter the Dynamic DNS password. You may enter up to 64 alphanumerical characters and symbols.
Hostname	Enter the Dynamic DNS hostname. You may enter up to 255 alphanumerical characters, hyphens, and periods.
Email Address	Enter the email address which is registered to the Dynamic DNS service. You may enter up to 64 alphanumerical characters and symbols.
TZO Key	Enter the TZO Key which is registered to the Dynamic DNS service. You may enter up to 64 alphanumerical characters and symbols.
Domain Name	Enter the domain name which is registered to the Dynamic DNS service. You may enter up to 255 alphanumerical characters, hyphens, and periods.

Parameter	Meaning
IP Address Update Period	Specifies the period to notify the dynamic DNS service provider of the current IP address. For DynDNS, set it between 0 and 35 days. For TZO, set it between 0 and 99 days. If 0 (zero) days is set, no periodic update is performed.
Internet Side IP Address	The WAN-side IP address of the AirStation's Internet port. This address is sent to the dynamic DNS service provider.
Domain Name	The domain name assigned by the dynamic DNS Service provider. The AirStation can be accessed from the Internet using this domain name.
Status	Display the status of dynamic DNS service.

VPN Server Settings

By using the PPTP server function it is possible to access the AirStation from the Internet and the LAN from a Windows PPTP client.

Note
If using GRE protocol (protocol no.47) and no.1723 TCP port filtering, then this function may not work correctly.
Also, be aware that if a router on the Internet side has these protocols blocked, then this function cannot be used.

Auto Input
Click this button to generate a random IP address with a small possibility of overlapping with IP addresses of other Buffalo routers.

LAN Side IP Address
Configure the AirStation's LAN [IP Address](#). The default is 192.168.11.1. If you want to connect the AirStation to an existing LAN, specify a unique, unused [IP Address](#) from the LAN's range of IP addresses.

Subnet Mask
Select the AirStation's LAN side Subnet Mask. The default is 255.255.255.0. If you want to connect the AirStation to an existing LAN, specify a unique, unused [IP Address](#) from the LAN's range of IP addresses.

DHCP Server Function
Enable the DHCP Server here. The default is enabled. If there is another DHCP server on the network, one DHCP server must be disabled or the IP ranges must be changed to avoid conflicts caused by overlapping DHCP scopes. If DHCP Server is enabled, confirm [DHCP IP Address Pool](#) doesn't overlap existing [IP Addresses](#) in the LAN segment.

DHCP IP Address Pool

(C)2000-2012 BUFFALO INC. All rights reserved.

Parameter	Meaning
Auto Input	Click to generate a random IP address.
LAN Side IP Address	Set a LAN side IP address and subnet mask.
DHCP Server Function	Enable or disable the DHCP server, which assigns IP addresses automatically.
DHCP IP Address Pool	Configure the range of IP addresses to be assigned by the DHCP server and IP addresses to be excluded from that range. Values from 1-256 may be entered.
PPTP Server Function	Enable to use a PPTP server.
Authorization Type	Select the authentication method for PPTP connection.
Server IP Address	Select the server IP address.
Client IP Address	Select the IP address range.
DNS Server IP Address	Choose the IP address for the DNS server.
WINS Server IP Address	Choose the IP address for the WINS server.
MTU/MRU Value	Configure MTU (Maximum Transmission Unit) / MRU (Maximum Receive Unit) between 578 and 1500 which is used during transmission on PPTP.
[Edit PPTP User List]	Click to edit user information.
Add new user	Click [Edit PPTP User List] to display.
Advanced Settings	Username Enter the username to connect to the PPTP server. You may enter up to 16 alphanumerical characters and symbols. Password Enter the password to connect to the PPTP server. You may enter up to 16 alphanumerical characters and symbols. Method of Acquiring IP Address Select the method to be used to assign the IP address is assigned to the PPTP client.
PPTP User List	Displays the PPTP connection user information.

LAN Side Ethernet Settings

Configure the AirStation's LAN [IP Address](#), Subnet Mask, and local DHCP Server settings here. Unless you're a networking expert, the default settings are recommended.

Note

If you have an existing LAN, the AirStation's configuration must be changed to connect to it. Please refer to [here](#) to set up your AirStation on an existing network.

LAN Side IP Address

Configure the AirStation's LAN [IP Address](#). The default is 192.168.11.1. If you want to connect the AirStation to an existing LAN, specify a unique, unused [IP Address](#) from the LAN's range of IP addresses.

(C)2000-2012 BUFFALO INC. All rights reserved.

Parameter	Meaning
LAN Side IP Address	By default, the LAN side IP address is 192.168.11.1 with subnet mask 255.255.255.0. You may change it here.
DHCP Server Function	Enable or disable the DHCP server, which assigns LAN-side IP addresses automatically.
DHCP IP Address Pool	Configure the range of IP addresses to be assigned by the DHCP server and IP addresses to be excluded from that range. Values from 1-256 may be entered.
LAN Side IP Address (For IP Unnumbered)	Set an IP unnumbered LAN side IP address. Note: A PC with a normal LAN side IP address and a PC with an IP Unnumbered IP address cannot communicate each other.
Advanced Settings	Check [Display] to display DHCP server advanced settings options.
Lease Period	Set the effective period of an IP address assigned by the DHCP server. Up to 999 hours may be entered.
Default Gateway	Set the default gateway IP address for the DHCP server to issue to clients.

Parameter	Meaning
DNS Servers Router mode only	Set the DNS server IP address for the DHCP server to issue to clients.
WINS Server Router mode only	Set the WINS server IP address for the DHCP server to issue to clients.
Domain Name Router mode only	Set the domain name for the DHCP server to issue to clients. You may enter up to 127 alphanumerical characters, hyphens, and periods.
Default Gateway Bridge mode only	Set the default gateway IP address.
DNS Server Address Bridge mode only	Set the DNS server IP address.

WPS (WiFi Protected Setup)

WPS

Configuring WPS
WPS is WiFi Protected Setup which corresponds to Windows Connect Now-NET (WCN-NET). WPS is also known as the Wi-Fi Simple Configuration Protocol. WPS function can safely and easily distribute wireless security information from an access point (AirStation) to the WPS clients. The WPS device which registers wireless security information is called Registrar. The AirStation has an internal Registrar built-in it, but can also use an External Registrar. The WPS device which receives the wireless security information from the Registrar is called Enrollee.

The default is Enable.

Warning

(C)2000-2012 BUFFALO INC. All rights reserved.

Parameter	Meaning
WPS	Enable to use WPS automatic configuration.
External Registrar	Enable to accept configure requests from other WPS devices. Note: Configure requests will not be accepted if AOSS is in use.
AirStation PIN	Displays the PIN code of the AirStation. Clicking [Generate PIN] will generate a new PIN code. This code can be entered into other wireless devices that support WPS.
Enrollee PIN	Enter the PIN code for the other wireless device and click [OK].
WPS status	Displays "configured" if all available wireless bands are configured. Displays "unconfigured" if at least one wireless band is unconfigured.

Basic Wireless Setting
(11ac/n/a/g/b)

You can set basic configuration information for your wireless LAN manually here. If encryption is not used, communication will be established just by this basic setup. Encryption is highly recommended, however. There are 2 standards (IEEE802.11ac/n/a and IEEE802.11n/g/b) for wireless LANs, and you can perform setup for each standard separately.

Wireless Radio
Un-checking "Enable" will disable wireless LAN functionality. When disabled, all wireless functionality, including broadcasting, is halted. Default value is enabled.

SSID
SSID is an identifying name for a

(C)2000-2012 BUFFALO INC. All rights reserved.

Parameter	Meaning
Wireless Radio	Determines whether to allow wireless communication. If this is unchecked, then no wireless connections will be allowed.
SSID	The SSID may contain 1 - 32 alphanumeric characters.
Wireless Channel	Sets a channel (a range of frequencies) for wireless connections. With Auto Channel selected, the AirStation will automatically use the best available channel.
High-Throughput Mode	High-throughput mode uses triple the normal frequency range, 80 MHz instead of 20 MHz. In uncongested areas this can increase performance. To use High-throughput mode, set the Bandwidth to 80 MHz.
Broadcast SSID	If [Allow] is checked, then the AirStation will respond to SSID searches from wireless devices by broadcasting its SSID. If [Allow] is unchecked, then the AirStation ignores SSID searches from wireless devices.

Parameter	Meaning
Wireless authentication	Specifies the authentication method used when connecting to a wireless device.
Wireless encryption	<p>You may use any of the following types of encryption:</p> <p>No encryption</p> <p>Data is transmitted without encryption. With this setting, anyone within range can connect to your wireless network and might be able to access data on the network. Not recommended for anyone with private data that needs to be kept secure. [No encryption] can be selected only when [No authentication] is selected for wireless authentication.</p> <p>WEP</p> <p>WEP is a common encryption method supported by most devices. WEP can only be selected when wireless authentication is set to [No authentication]. Note that WEP's encryption is weak, and networks protected with WEP are not much more secure than those with no encryption at all. Not recommended for anyone with private data that needs to be kept secure.</p> <p>TKIP</p> <p>TKIP is an encryption method which is more secure than WEP, but slower. Use an pre-shared key to communicate with a wireless device.</p> <p>TKIP can be selected only when WPA-PSK or WPA2-PSK is selected for wireless authentication.</p> <p>AES</p> <p>AES is more secure than TKIP, and faster. Use a pre-shared key to communicate with a wireless device.</p> <p>AES can be selected only when WPA-PSK or WPA2-PSK is selected for wireless authentication.</p> <p>TKIP/AES mixed mode</p> <p>TKIP/AES mixed mode allows both TKIP and AES authentication and communication. This is no more secure than TKIP alone, but more convenient for some users. TKIP/AES mixed mode can be selected only when WPA/WPA2 mixed mode - PSK is selected for wireless authentication.</p>

Parameter	Meaning
WPA-PSK (Pre-Shared Key)	A pre-shared key or passphrase is the password for your wireless connections. There are two different formats for a pre-shared key. Use 8 to 63 alphanumeric characters (case-sensitive) for an ASCII passphrase, or use 64 alphanumeric characters (0 to 9 and a to f, not case-sensitive) for a hexadecimal passphrase.
Rekey interval	Set the update interval for the encryption key between 0 and 1440 (minutes).
Setup WEP encryption key	A WEP encryption key (passphrase) may have any of four different formats. An ASCII passphrase may use either 5 or 13 alphanumeric characters (case-sensitive). A hexadecimal passphrase may use either 10 or 26 alphanumeric characters (0 to 9 and a to f, not case-sensitive).

Advanced Wireless Settings (11ac/n/a/11n/g/b)

Specify Advanced Wireless Settings.

BSS BasicRateSet
BSS (Basic Service Set) configures the transmission rate of control communication frames for a wireless client. Setup choices may vary with different wireless clients.

Multicast Rate
11ac/n/a :

(C)2000-2012 BUFFALO INC. All rights reserved.

Parameter	Meaning
BSS Basic Rate Set	BSS (Basic Service Set) configures the transmission rate of control communication frames for a wireless client. Setup choices may vary with different wireless clients.
Multicast Rate	Set the communication speed of multi-cast packets.
802.11n Protection	Enable to use 802.11n protection. 802.11n protection gives priority to 802.11n devices in mixed mode (11b/g or 11a) networks.
DTIM Period	Set the beacon responding interval (1 -255) for which the AirStation responds to a wireless device. This setting is effective only when power management is enabled for the wireless device.
Privacy Separator	If enabled, the Privacy Separator blocks communication between wireless devices connected to the AirStation. Wireless devices will be able to connect to the Internet but not with each other. Devices that are connected to the AirStation with wired connections will still be able to connect to wireless devices normally.
Output Power	This sets the output of the wireless signal. Because the wireless transmission output and signal distance range are nearly proportional, when the wireless transmission output is reduced, the signal distance range also becomes shorter.

WMM

Set priorities for specific communications.

Setup	Internet/LAN	Wireless Config	Security	LAN Config	NAS	Admin Config	Diagnostic

Apply

WMM Settings (11ac/n/a/11n/g/b)

Prioritized AirStation communication for specific transactions. This settings provides some real time communication, which can help improve the quality of VOIP or other streaming protocols.

WMM-EDCA Parameters

It is usually not necessary to change this value.

Priority

The priority is ranked (Highest)8 : (High)4 : (Normal)2 : (Low)1 for each packet.

Parameter

CWmin, CWmax
The maximum and minimum value for the contention window. The contention window is used to control the frame collision avoidance system in IEEE802.11. Values that can be inputted: 1-32767.

AIFSN
Interval of the sending frame. The unit defines a time-slot (similar to the window value of CWmin, CWmax). Lower values define a higher priority as the back-off algorithm starts earlier. Values that can be inputted: 1-15.

TXOP Limit
The time for the queue to obtain send priority. The minimum value is 32ms. Large values can send more frames at a time. However, the maximum value is 100ms.

(C)2000-2012 BUFFALO INC. All rights reserved.

- 42 -

Parameter	Meaning
WMM-EDCA Parameters	<p>You don't usually need to change these settings. Using the default settings is recommended.</p> <p>Priority</p> <p>The following priorities may be applied to individual transmission packets: (Highest) 8, (High) 4, (Normal) 2, and (Low) 1. From the queue, these packets are processed in order of priority.</p> <p>CWmin, CWmax</p> <p>The maximum and minimum value of the contention window. The contention window is used in the frame collision avoidance structure performed in IEEE802.11, and generally, the smaller the value in the window, the higher the probability that the queue obtains the right to send.</p> <p>AIFSN</p> <p>The interval to send frames. The unit of the AIFSN is a slot, just as the window defined by CWmin and CWmax is. The smaller the interval of sending frames, the faster the algorithm can restart. As a result, the priority of the queue is higher.</p> <p>TXOP Limit</p> <p>The period of time that the queue can use after obtaining the right to send. The unit is 32 ms. The longer this time, the more frames can be sent per right to send. However, the queue may interfere with other packet transmissions. If TXOP Limit is set to 0 (zero), only one frame can be sent per right to send.</p> <p>Admission Control</p> <p>Restricts new frames from interfering with a previous queue. New packets are prioritized lower until a queue of them is collected. As the new queue accumulates more packets, its priority increases.</p>

MAC Filter

Restrict access to specific wireless devices.

Although the AirStation performs Address Translation only for communication which is started from the LAN side, certain applications, such as network games, require that you allow communications from the Internet side via (Static NAT). Edit the rules for communicating from outside the internal network to the LAN side network device(Static NAT) carefully, consulting your internet game's documentation as necessary. Up to 32 rules can be registered.

Add/Edit Port Forwarding

You can add new port forwarding information and edit existing information.

Group

You can give a name (group name) to configured Static NAT's and give multiple Static NAT's one name and manage them together. By giving names to groups, you can [Enable] or [Disable] each

(C)2000-2012 BUFFALO INC. All rights reserved.

Parameter	Meaning
Group	Specify a group name for a new rule to belong to. Select [New Group] and enter the new group name in the Group Name field to create a new group. A group name can include up to 16 alphanumeric characters.
Internet Side IP Address	Enter the Internet side IP address (before translation) for the port translation table entry.
Protocol	Select the Internet side protocol (before translation) for the port translation table entry.

Parameter	Meaning
LAN Side IP Address	Enter the LAN side IP address (after translation) for the port translation table entry.
LAN Side Port	Select the LAN side (after translation) port number (1 - 65535) for the port translation table entry.
Port Forwarding Registration Information	Shows current entries in the port translation table.

DMZ (Router Mode only)

Configure a destination to transfer communication packets without a LAN side destination to.

Parameter	Meaning
IP Address of DMZ	Enter the IP address of the destination to which packets which are not routed by a port translation table are forwarded. Note: RIP protocol packets (UDP port number 520) will not be forwarded.

UPnP (Router Mode only)

Configure UPnP (Universal Plug and Play).

5	<input type="checkbox"/>		TCP		low
6	<input type="checkbox"/>		TCP		low
7	<input type="checkbox"/>		TCP		low
8	<input type="checkbox"/>		TCP		low

Apply

QoS Setting

QoS is a technology to use the bandwidth on the network more effectively. When two or more packets arrive at the same time, the packet with higher priority is processed first. This can be used to give priority to communications that require real time processing, such as VOIP.

QoS for transmission to the Internet

If checked, this gives priority to packets being transmitted to the Internet. When enabled, you will be able to add four levels of increased priority for specific applications. By default, this is disabled.

Uplink Bandwidth

Specify the bandwidth transferred from this unit to the Internet in kbps. The real uplink bandwidth should be entered. If a bandwidth value larger than the real line speed is entered, the uplink bandwidth will be limited by the line speed. If a smaller bandwidth value is entered, the

(C)2000-2012 BUFFALO INC. All rights reserved.

Parameter	Meaning
QoS for transmission to the Internet	Determine whether or not to prioritize packets sent to the Internet. Check this box to enable QoS.
Upload bandwidth	Specify the upstream bandwidth in kbps from the AirStation to the internet side. Set the actual value for the upstream bandwidth.
Enable	Enable or disable this entry.
application name	Enter an application name. Names may use up to 32 alphanumeric characters, double or single tick marks (""), quotation marks (""), and semicolons (;).
protocol	Select either TCP or UDP.
destination Port	Specify a destination port from 1 - 65535. If this field is empty, a random port is selected.

Parameter	Meaning
priority	Select high, medium or low. If packets do not qualify for classification as a type on the list, then their priority is treated as a level between medium and low.

System Information

Displays the AirStation's main settings.

Model

Displays the model name and firmware version of the AirStation.

AirStation Name

Displays the AirStation's host name.

Mode Switch Status

Displays the status of the Router Mode switch.

Operational Mode

Displays the current mode of operation.

Internet

AirStation's [INTERNET port](#) side information.

Method of Acquiring IP Address

Acquiring a Internet IP address.

Name of the Connection

The name of the PPPoE connection specified in the configuration.

Connection Status

Displays the current Internet side status.

Operational Mode

The Operational Mode will show if any DHCP or PPPoE configuration is active. If DHCP is in use, the following commands can be executed.

- [Release] : Releases the IP address assigned by the DHCP Server.
- [Renew] : Renews the IP address from the DHCP Server.

The following commands can be executed when using PPPoE.

- [Start] : Start connecting to a PPPoE Server from idle/stop.
- [Connect] : Connect to PPPoE from an idle condition.
- [Disconnect] : Disconnect communication with a PPPoE Server.
- [Stop] : Stop idle condition.

IP Address

The IP address assigned to the AirStation.

Subnet Mask

The Subnet Mask assigned to the

(C)2000-2012 BUFFALO INC. All rights reserved.

Parameter	Meaning
Model	Displays the product name of the AirStation and the firmware version.
AirStation Name	Displays the name of the AirStation.
Mode Switch Status	Displays the status of the AirStation's mode switch.
Operational Mode	Displays the AirStation's current operational mode.
Internet	Displays information about the Internet port.
LAN	Displays information about the LAN port.
Wireless	Displays the wireless status.
NAS	Displays information about the USB disk.
ECO Mode	This indicates the operating status of ECO Mode.

Logs

The AirStation's logs are recorded here.

Ping

A Ping test can be performed from the AirStation. With a ping test, you can determine whether the AirStation can communicate with a specific network device.

Destination Address

Enter the network IP address that you want to ping; e.g. 192.168.11.3 or www.buffalotech.com.

Parameter	Meaning
Destination Address	Enter the IP address or hostname of the device that you are testing communication with, then click [Execute]. The result will be displayed below.

Chapter 4 - Connect to a Wireless Network

Automatic Secure Setup (AOSS / WPS)

AOSS and WPS are systems that enable you to automatically configure wireless LAN settings. Just pressing the buttons will connect wireless devices and complete security settings. Use them to automatically connect wireless devices, computers, or game machines which support AOSS or WPS.

AOSS (AirStation One-Touch Secure System) is technology developed by Buffalo Technology. WPS was created by the Wi-Fi Alliance.

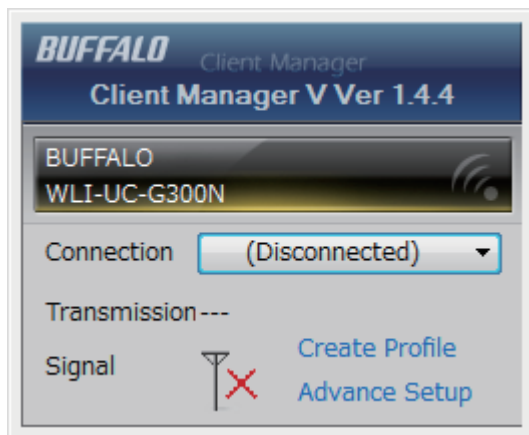

- Before using AOSS or WPS to connect the Buffalo wireless client to the computer, download Client Manager or AOSS Assistant from the Buffalo website and install it.
- Buffalo's Client Manager software can be used with the wireless LAN devices built into your computer. However, it is not guaranteed to work with all wireless LAN devices available.

Windows 7/Vista (Client Manager V)

If you are using Windows 7 or Vista, use the Client Manager V to connect wirelessly with AOSS or WPS.

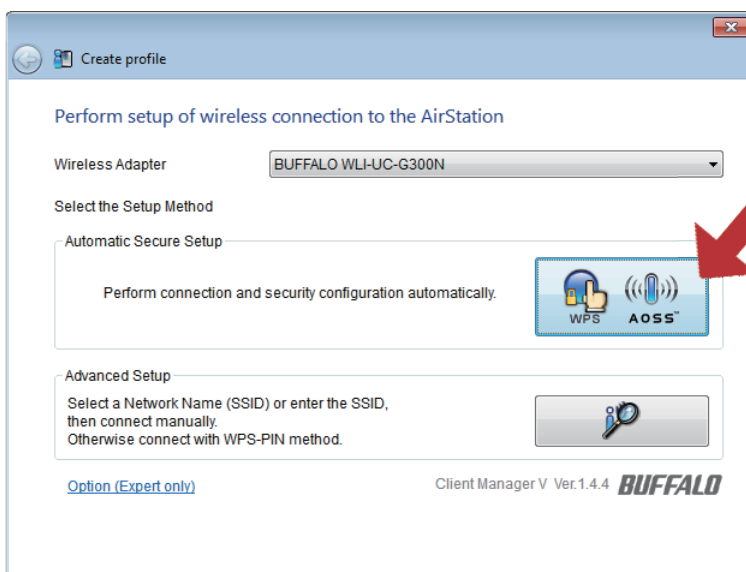

1 Click [Start] > [All Programs] > [BUFFALO] > [AirStation Utility] > [Client Manager V].

2 Click [Create Profile].

3 If the User Account Control screen opens, click [Yes] or [Continue].

4 Click the [WPS AOSS] button.

Follow any instructions displayed on the screen. When the Wireless LED on the front of the AirStation stop flashing and glows steadily, the connection is complete.

Windows XP (Client Manager 3)

If you are using Windows XP, use Client Manager 3 to connect wirelessly with AOSS or WPS.

1 Right-click on the  icon in the system tray and select [Profile].

Click the [WPS AOSS] button.

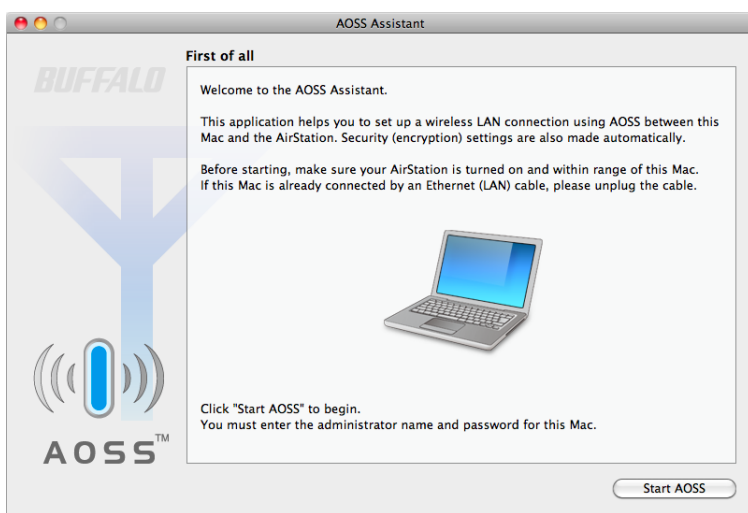

It will take several seconds for your wireless connection to be configured. When the Wireless LED on the front of the AirStation stop flashing and glows steadily, the connection is complete.

Mac OS X (AOSS Assistant)

If you are using Mac OS X 10.7 / 10.6 / 10.5 / 10.4, use the AOSS Assistant to connect wirelessly with AOSS.

- 1 Run the AOSS Assistant program that was downloaded from the Buffalo web site.
- 2 The software license screen is displayed. Click [Agree] to proceed.

3

Click [Start AOSS].

4

Enter the Mac's username and password and click [OK].

It will take several seconds for your wireless connection to be configured. When the Wireless LED on the front of the AirStation stop flashing and glows steadily, the connection is complete.

Other Devices (e.g. Game Console)

If you are using a game machine which supports AOSS or WPS, refer to that device's manual to initiate AOSS or WPS. When instructed, hold down the AOSS button on the AirStation for 1 second.

When the Wireless LED on the front of the AirStation stop flashing and glows steadily, the connection is complete.

Manual Setup

You can also connect to the AirStation without installing Client Manager V or Client Manager 3 by using the utility built-in to operating system. The procedure varies depending on which version of operating system you are using.

Windows 7 (WLAN AutoConfig)

With Windows 7, use WLAN AutoConfig to connect to the AirStation.

1 Click on the network  icon in the system tray.

2

The screenshot shows the Windows 7 WLAN AutoConfig window. At the top, it says 'Currently connected to: Network Internet access'. Below that is a section for 'Wireless Network Connection'. The first entry is 'manual_G' with a signal strength indicator and a 'Connect' button. Below it is a section for 'WAP-G' with a signal strength indicator. The next entry is '0018E76A1E6E' with a signal strength indicator. The bottom entry is '001D7390E9F9' with a signal strength indicator. A tooltip is visible over the '001D7390E9F9' entry, showing details: 'Name: 0018E76A1E6E', 'Signal Strength: Fair', 'Security Type: WPA2-PSK', and 'Radio Type: 802.11n'. There is also an 'Open Network and...' link at the bottom left.

Select the target AirStation and click [Connect]. If you will be connecting to this device in the future, checking [Connect automatically] is recommended.

3

Enter the encryption key and click [OK].

Windows Vista (WLAN AutoConfig)

With Vista, use WLAN AutoConfig to connect to the AirStation.

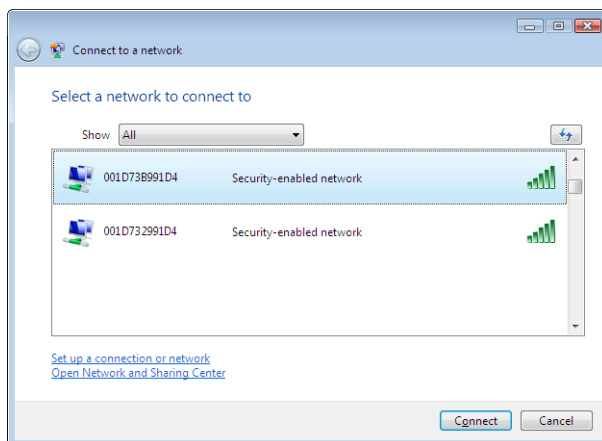

1

Right-click on the wireless network  icon in the system tray.

2

Click [Connect to a network].

3

When this screen is displayed, select your network and click [Connect].

If the screen below is displayed, click [I want to enter the network key or passphrase instead]. Otherwise, go to step 4.

4

Enter the encryption key and click [Connect].

Step through the wizard to finish configuration.

If the Set Network Location screen is displayed, select [Home], [Work], or [Public location] depending on where you're using the AirStation.

Windows XP (Wireless Zero Configuration)

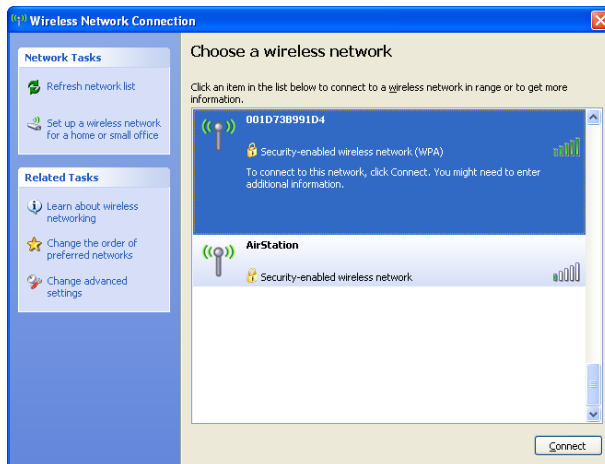

Windows XP includes Wireless Zero Config, a built-in utility to connect to your AirStation.

Note: If Client Manager 3 is installed on your computer, Wireless Zero Config is disabled. Uninstall Client Manager 3 to use Wireless Zero Config, or just use Client Manager 3 to connect to the AirStation.

1 Right-click on the  wireless network icon in the system tray.

2 Click [View Available Wireless Networks].

3 Select the network to connect to and click [Connect].

4 Enter the encryption key (twice) and click [Connect].

It will take several seconds for configuration to complete.

Mac OS X (Wi-Fi)

Use Wi-Fi on a Mac to connect to the AirStation.

Note: In Mac OS X 10.6 and earlier, "Wi-Fi" appears as "AirPort".

1

Refer to the setup card at the bottom of the AirStation. Make a note of the SSID and Key printed on the setup card.

2

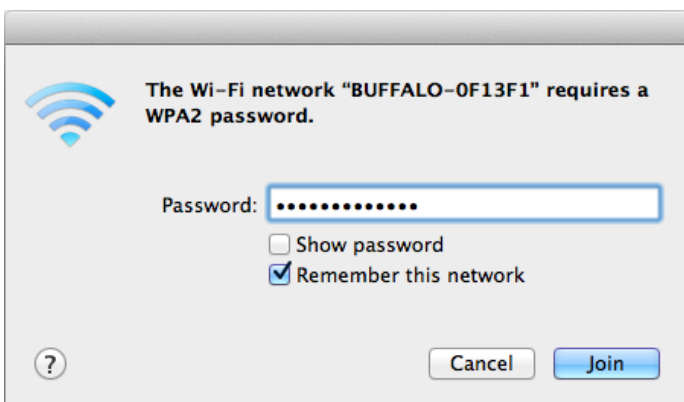

Click the  icon in the top section of the screen and select [Turn Wi-Fi On].

3

Find the SSID from step 1 on the list. Click it to highlight it.

4

Enter the Key from step 1 into the Password entry box, check [Remember this network], and click [OK].

It will take several seconds for configuration to complete.

Chapter 5 - Troubleshooting

Cannot connect to the Internet over wired connection.

- Make sure that your AirStation is plugged in!
- Check that the status LEDs of your AirStation are lit as below:

Buffalo	White light is on
LAN	Green light is on or blinking
Internet	Green light is on or blinking
- Make sure that your computer is configured to “obtain an IP address automatically from DHCP”.
- Restart your AirStation.

Cannot access the web-based configuration Interface.

- See chapter 3 for instructions to open the AirStation’s configuration interface.
- Enter the correct username and password to log in to the configuration interface. If you are using AirStation with factory default settings, enter “admin” for the username and “password” for the password.
- Verify that your web browser is not set to use proxies.
- Make sure that your computer is configured to “obtain an IP address automatically from DHCP”.
- Restart your AirStation.

Cannot connect to the network wirelessly.

- Configure your wireless client with the same SSID, encryption type, and encryption key as set on the AirStation.

The factory defaults are:

SSID - BUFFALO-XXXXXX (the last 6 digits of the AirStation's MAC address) + "_A" or "_G".

Encryption Type - WPA2 - PSK AES, or none.

Encryption Key - Printed on the Setup card.

Note: For details, refer to the Setup card.

- Place your AirStation and wireless devices 2 - 10 feet apart.
- Restart your AirStation.

You forgot AirStation's SSID, Encryption Key, or Password.

Hold down the reset button on the base of your AirStation for 3 seconds to initialize its settings. All settings, including your password, SSID, and encryption key will be initialized to their defaults.

Restoring the Default Configuration

With the AirStation powered on, hold down this button for 3 seconds to return it to factory default settings.

TCP/IP Settings (Windows 7)

To configure TCP/IP in Windows 7, follow the procedure below.

- 1** Click [Start] > [Control Panel] > [Network and Internet].
- 2** Click [Network and Sharing Center].
- 3** Click [Change Adapter Settings] on the left side menu.
- 4** Right-click on [Local Area Connection], then click [Properties].
- 5** If the User Account Control screen opens, click [Yes] or [Continue].
- 6** Select [Internet Protocol Version 4 (TCP/IPv4)] then click [Properties].
- 7** To have DHCP set your IP address settings automatically, check [Obtain an IP address automatically] and [Obtain DNS server address automatically].

To set your IP address settings manually, enter values for each setting. Examples:

If the router's IP address is 192.168.11.1,	
IP address	192.168.11.80
Subnet mask	255.255.255.0
Default gateway	192.168.11.1
Preferred DNS server	192.168.11.1
Alternate DNS server	blank

- 8** Click [OK].

TCP/IP Settings (Windows Vista)

To configure TCP/IP in Windows Vista, follow the procedure below.

- 1** Click [Start] > [Settings] > [Control Panel].
- 2** Click [Network and Sharing Center].
- 3** Click [Manage network connections] on the left side menu.
- 4** Right-click on [Local Area Connection], then click [Properties].
- 5** If the User Account Control screen opens, click [Yes] or [Continue].
- 6** Select [Internet Protocol Version 4 (TCP/IPv4)], then click [Properties].
- 7** To have DHCP set your IP address settings automatically, check [Obtain an IP address automatically] and [Obtain DNS server address automatically].

To set your IP address settings manually, enter values for each settings. Example:

If the router's IP address is 192.168.11.1,	
IP address	192.168.11.80
Subnet mask	255.255.255.0
Default gateway	192.168.11.1
Preferred DNS server	192.168.11.1
Alternate DNS server	blank

- 8** Click [Close].

TCP/IP Settings (Windows XP)

To configure TCP/IP in Windows XP, follow the procedure below.

- 1** Click [Start] > [Settings] > [Control Panel].
- 2** Double-click [Network].
- 3** Right-click on [Local Area Connection], then click [Properties].
- 4** Select [Internet Protocol (TCP/IP)], then click [Properties].
- 5** To have DHCP set your IP address settings automatically, check [Obtain an IP address automatically] and [Obtain DNS server address automatically].

To set your IP address settings manually, enter values for each setting. Examples:

If the router's IP address is 192.168.11.1,	
IP address	192.168.11.80
Subnet mask	255.255.255.0
Default gateway	192.168.11.1
Preferred DNS server	192.168.11.1
Alternate DNS server	blank

- 6** Click [Close].

TCP/IP Settings (Mac OS X)

To configure TCP/IP in Mac OS X, follow the procedure below.

- 1** Click [Apple menu] > [System Preferences...].
- 2** Click [Network].
- 3** Click [Ethernet].
- 4** To have DHCP set your IP address settings automatically, select [Using DHCP] in the Configure IPv4 field.

To set your IP address settings manually, select [Manually] in the Configure IPv4 field and enter values for each setting. Examples:

If the router's IP address is 192.168.11.1,	
IP Address	192.168.11.80
Subnet Mask	255.255.255.0
Router	192.168.11.1
DNS Server	192.168.11.1
Search Domains	blank

- 5** Click [Apply].

Other Tips

Issue:

I reset my wireless router to factory settings and forgot how to log in to the configuration interface.

Answer:

Open your browser, enter 192.168.11.1 as the browser address, and hit Enter. You will be prompted to log in. Enter "admin" for the username and "password" for the password. Click [OK] to log in. The option to reset your password will be available on the first page.

Issue:

How do I forward ports on my wireless router for my gaming console?

Answer:

Log in to the router. From the home page, go to the LAN Config section. Enter the port that needs to be forwarded and the IP address of the gaming console.

Issue:

How do I enable or modify security encryption settings on the wireless router?

Answer:

Go to the Wireless Config tab and then select the Security tab. Buffalo recommends the use of WPA2-PSK AES for wireless encryption. The passphrase/ key should be at least 8 characters in length.

Issue:

How do I change my wireless router's broadcasted network name (SSID)?

Answer:

Log in to the wireless router with your browser. Navigate to Wireless Config - Basic. Find the SSID setting. Select [Use] and enter the new name for your network. Click [Apply]. Once the wireless router has rebooted, you will need reconnect any wireless clients to the AirStation using the new network name. The encryption key will still be the same.

Issue:

What can I do if my wireless connection drops randomly or seems slow?

Answer:

There are many environmental factors that may cause this. First, ensure the issue is not range related by moving the wireless router and the client device closer together. If the connection drops continue, then range is probably not the issue.

Other 2.4 GHz devices such as microwaves, other wireless networks, and 2.4 GHz wireless phones may impact performance. Try a different wireless channel for your wireless router. Log in to the wireless router with your browser. Click on the Wireless Config tab and then the Basic tab. Wireless channels from 1 - 11 may be selected. Try the Auto-Channel option if available. Otherwise, manually select an alternate channel and click [Apply].

Issue:

Though I am able to successfully make a connection with my wireless router, I am unable to access the Internet with my web browser.

Answer:

First, press the Router button on the AirStation to switch to router mode. The Router LED on the AirStation turns on, and after about one minute, turn off the cable or DSL modem, AirStation, and your computer. Verify that the modem is connected to the Internet port on the AirStation with a Ethernet cable. Power on the modem and wait one minute. Power on the wireless router and wait another minute. Power on the computer. Open a browser on the computer and navigate to a familiar website to verify whether the Internet connection is functioning normally.

If after these steps, an Internet connection is still unavailable, power off the cable or DSL modem and computer again and directly connect your computer to the cable or DSL modem with a cable between the computer and the port on the modem. Power on the modem and wait one minute. Power on the computer and again check for an Internet connection.

If an Internet connection IS NOT available with a direct connection to the computer, please call the Internet Service Provider who installed the modem.

If an Internet connection IS available with a direct connection to the computer, please call our customer support.

Issue:

Where can I download the latest drivers, firmware, and instructions for my Buffalo wireless products?

Answer:

The latest drivers and firmware are available online at
www.buffalotech.com

Chapter 6 - Default Configuration Settings

Feature	Parameter	Default Setting
Internet (Router mode only)	Method of Acquiring IP Address	Perform Easy Setup (Internet Connection Wizard)
	Default Gateway	none
	DNS Name Server Address	none
	Internet MAC Address	Use Default MAC Address
	MTU Size of Internet Port	1500 Bytes

Chapter 7 - Network-USB Navigator

Network-USB Navigator is compatible only with printers and multifunction printers (all-in-one devices with a printer, scanner, and memory card reader). It cannot be used with any other type of USB devices.

Initial Setup for Windows Users

- 1 Insert the AirNavigator CD into your computer.

The setup menu will launch automatically. If not, open the CD and click on "Launcher.exe" in the "win" folder.

Click [Software installation].

3

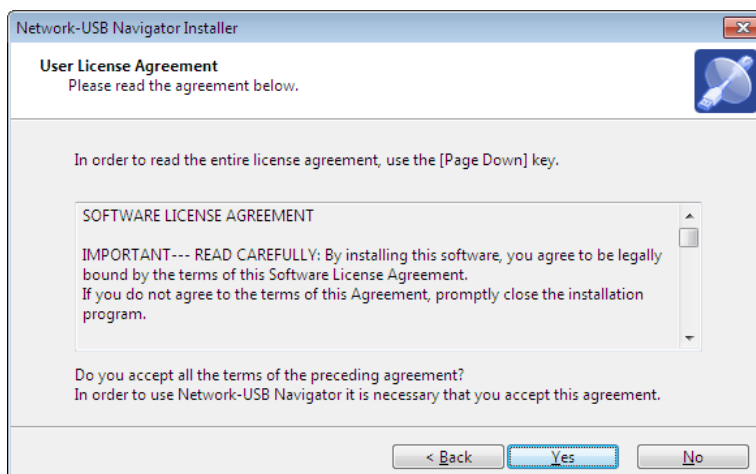

Check the box for “Network-USB Navigator” and click [Install].

4

Click [Next].

5

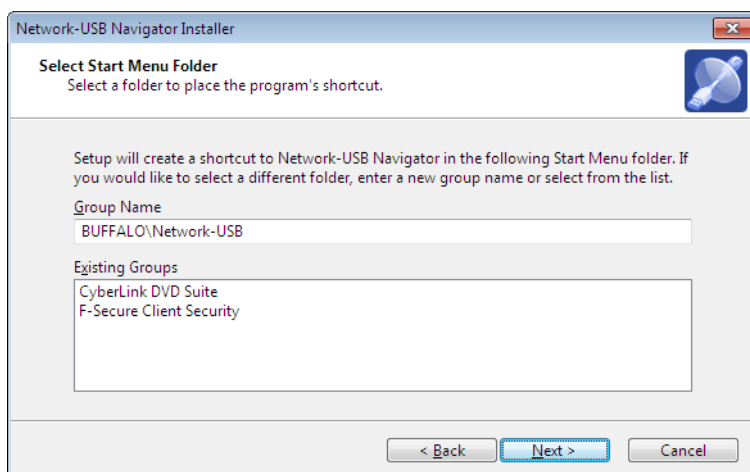

Read the license agreement.
Click [Yes] to continue.

6

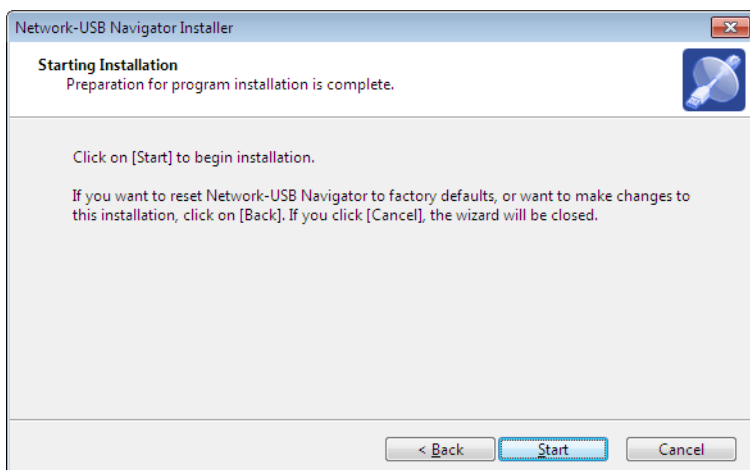

Click [Next].

7

Click [Next].

8

Click [Start].

- Installation on Windows XP (SP2 or later)

Click [Yes] when this screen is shown.

- Installation on Windows 7/Vista

Click [Install] when this screen is shown.

Click [Yes] when this screen is shown.

9

1 You can select the behavior of this product when a USB device is detected. Select the connection behavior suited to your usage environment.

2 Click [Next].

10 Click [Finish] when the “Network-USB Navigator Install is Complete” screen is shown.

Network-USB Navigator installation is complete.

Initial Setup for Mac Users

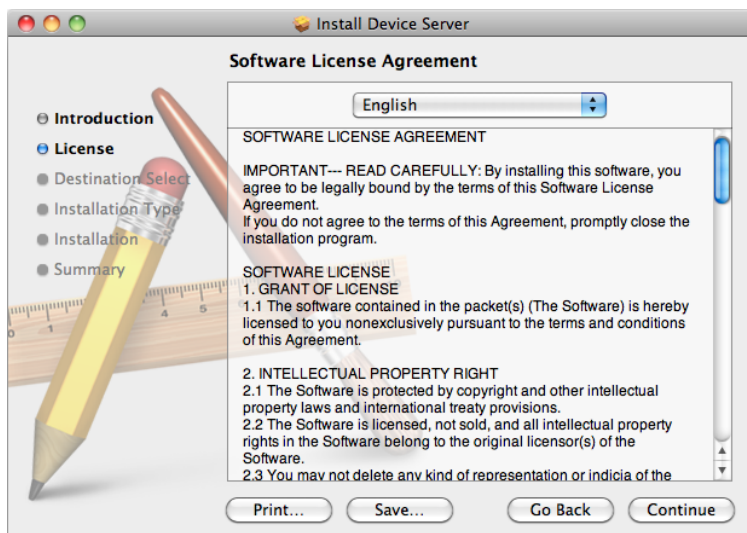

- 1 Insert the Air Navigator CD.
- 2 From the menu bar, click [Go] > [Computer].
- 3 Double-click the CD icon, and then double-click [Mac] > [DeviceServer] > [Cosetup].

4

Click [Continue].

5

Read the license agreement, and then click [Continue].

6

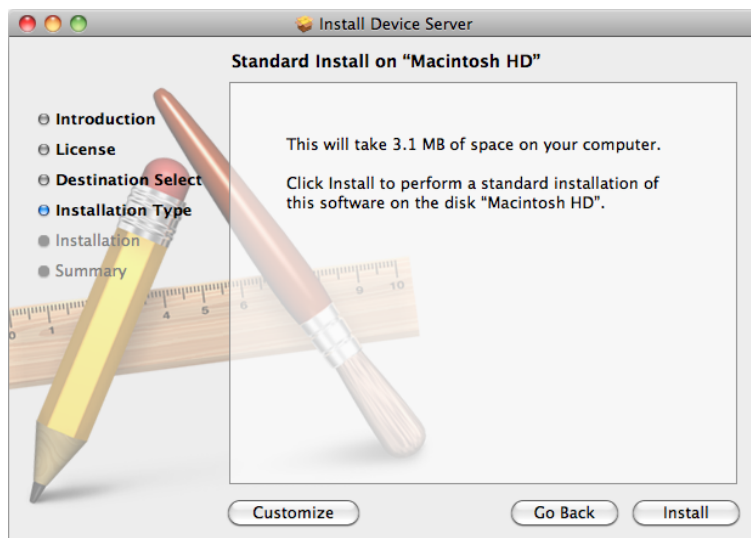

Click [Agree] to continue.

7

Click [Continue].

8

Click [Install].

9

Input your name and password.

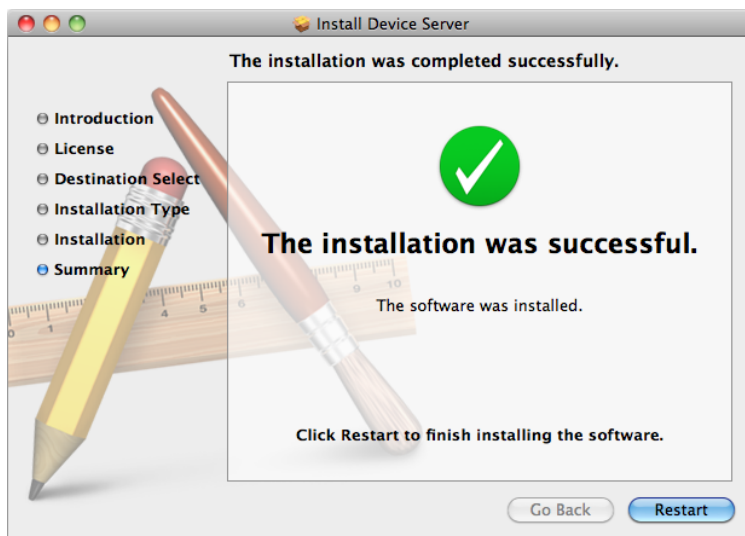

Click [OK].

10

Click [Continue Installation].

11

Click [Restart].

12

1 During the first program launch only, the screen at left will appear before the main program screen is displayed. From here, you can select the behavior of this product when a USB device is detected. Select the connection behavior suited to your usage environment.

2 Click [OK].

Network-USB Navigator installation is complete.

Opening the Network-USB User Manual

1 Launch Network-USB Navigator.

There are two ways to launch the program.

Windows Users

- a) Click the task tray icon .
- b) From the Start menu, click [(All) Programs]-[BUFFALO]-[Network-USB]-[Network-USB Navigator].

Macintosh Users

- a) Click the Dock icon .
- b) Click [Macintosh HD]-[Applications]-[BUFFALO]-[Device Server]-[Network-USB Navigator].

2

Click , then click [Manual Page].

3

Network-USB User Manual will open.

How to use Network-USB

To configure Network-USB, refer to the “Network-USB User Manual”.

Chapter 8 - Checking Wireless Signal Quality

For users of Windows 7, Vista, or Mac OS X (10.4 and later), software supplied with the AirStation can be used to check the quality and strength of the wireless signal.

Windows 7/Vista

Note: · If Client Manager V is not already installed, download it from the Buffalo web site, and install.

· Client Manager V does not support Windows XP.

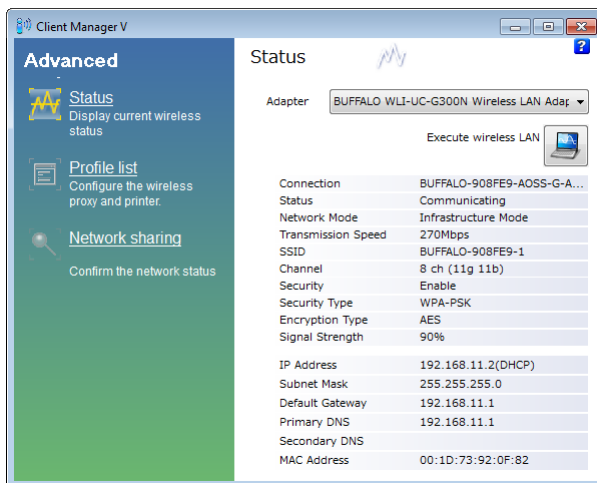

1 Click [Start] > [All Programs] > [BUFFALO] > [AirStation Utility] > [Client Manager V].

2

Click [Advanced Setup].

3

When the Client Manager V status screen is displayed, click  .

4

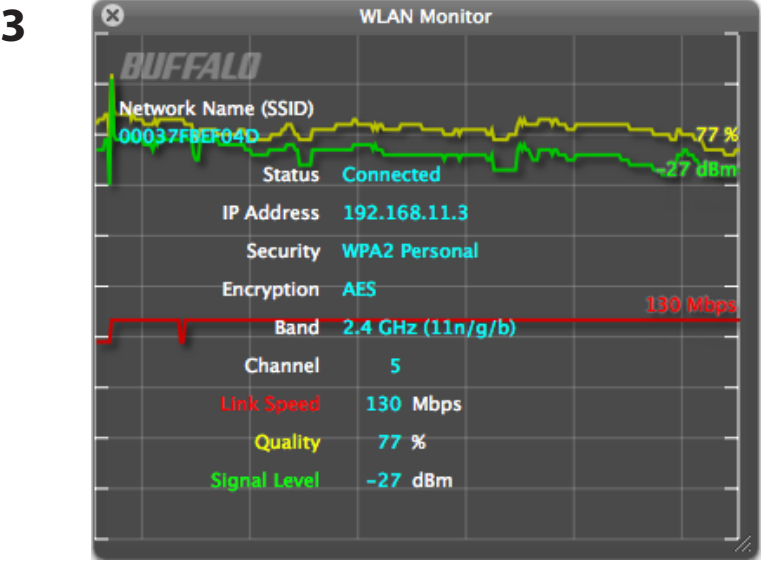

Parameter	Meaning
Connection status	Signal strength (dBm), link speed (Mbps), and signal quality (%) are displayed in one-minute intervals on a real-time graph.
Usage status by channel	The 11b/11g display shows usage in the 2.4 GHz band channels 1 to 11. The 11a display shows usage in the W52, W53, and W56 channels.

Colors are used to indicate the signal strength of the access point. Colors closer to red indicate an access point with a stronger signal strength, and colors closer to blue indicate an access point with a weaker signal strength.

Mac OS X

- 1 Run the WLAN Monitor program that was downloaded from the Buffalo web site.

2 The software license screen is displayed when starting for the first time only. Click [Agree] to proceed.

Parameter	Meaning
Network name (SSID)	This displays the SSID of the AirStation that is currently connected.
Status	This indicates the current connection status.
IP Address	This indicates the IP address of the current wireless network port (Wi-Fi).
Security	This indicates the authentication method for the current connection target.
Encryption	This displays the encryption type for the current connection target.
Band	This displays the wireless band for the current connection target.
Channel	This displays the wireless channel for the current connection target.
Link Speed (Mbps)	This displays the current link speed.
Quality (%)	This displays the current signal quality.
Signal Level (dBm)	This indicates the strength of the current signal.

Chapter 9 - Shared Folders and the USB Port

There are several restrictions on using the AirStation's USB port:

- When using two-byte characters (such as Japanese), keep folder and file names within 80 characters. You may not be able to copy a folder or a file whose name length is more than 80 characters.
- You cannot set attributes (hidden or read-only) for folders or files on the AirStation.
- When using access restrictions, you can register up to 16 users for the AirStation.
- Please note that you are not allowed to use any of the following words as a user or group name: adm, administrator, all, bin, daemon, disk, ftp, guest, halt, hdusers, kmen, lp, mail, man, news, nobody, nogroup, none, operator, root, shadow, shutdown, sshd, sync, sys, ttyusers, utmp, uucp, www.
- Please note that you are not allowed to use any of the following words as a shared folder name: global, homes, printers, bittorrent, disk1_pt1, disk1_pt2, disk1_pt3, disk1_pt4, disk2_pt1, disk2_pt2, disk2_pt3, disk2_pt4, disk3_pt1, disk3_pt2, disk3_pt3, disk3_pt4, disk4_pt1, disk4_pt2, disk4_pt3, disk4_pt4.
- If shared folder names, work group names, or file names contain any of the following characters, you may not access data or manipulate files on the AirStation properly. In such a case, use a different character.
- If a file created on a Macintosh contains any of the following characters, it will not be displayed correctly under Windows OS. Also, you cannot copy or properly display a file when connecting via SMB from Mac OS X if it contains any of these characters:
`? [] \ / = + < > ; : " , | *`
- Cancelling or aborting a file copy may leave the file incomplete, and you may no longer be able to delete the incomplete file. This can also happen during a power outage or if the LAN cable is suddenly disconnected. If it happens, restart the AirStation, delete the file, and try copying the file again.
- Use the same username and password for the AirStation as the user's Windows login. If they are different, the user may not be able to access shared folders with access restrictions on the AirStation.
- Date and time stamps stored on the USB hard drive may be updated by the OS accessing the AirStation. File creation or access dates may not be maintained.

- If you view the size of a hard drives on the browser, it shows a bigger value than when you see it in Windows' drive properties. This is because the browser shows the size of the drive in gigabytes but Windows shows it in gibibytes.
- If you have logged in using a "guest" account from Windows 7, Vista, XP or 2000, access restrictions may not work properly. A (different) guest account already exists on the AirStation.
- If you access a shared folder from a Macintosh computer, additional Mac OS X information files may be automatically generated. Do not delete these files from a Windows computer. Otherwise, you may no longer be able to access folders from a Macintosh.
- Device types that can be connected to the AirStation's USB connector are USB hard drives, USB memory sticks, or USB card readers. Card readers with 5 or more slots are not supported. USB devices such as a digital cameras, CD/DVD drives, USB hubs, mice, or keyboards are not supported.
- Encrypted USB hard drives are not supported.
- Only one single drive may be connected to the AirStation's USB port at a time. Drives manufactured by other companies besides Buffalo Technology are not supported.
- If your hard drive has an auto power mode switch, move the switch to [manual] or [on]. Leaving the switch set to [auto] may result in unpredictable behavior.
- Up to 4 partitions can be recognized on a USB hard drive.
- Available file systems for USB hard drives are FAT12, FAT16, FAT32, and XFS.

Appendix A - Specifications

Wired LAN Interface	
Standard Compliance	IEEE802.3ab (1000BASE-T), IEEE802.3u (100BASE-TX), IEEE802.3 (10BASE-T)
Transmission Rate	10 / 100 / 1000 Mbps
Transmission Encoding	1000BASE-T 4DPAM5, 100BASE-TX 4B5B/MLT-3, 10BASE-T Manchester Coding
Access Method	CSMA/CD
Speed and Flow Control	10 / 100 / 1000 Mbps, Auto Sensing, Auto MDIX
Number of LAN Ports	4
LAN Port Connector	RJ-45
Wireless LAN Interface	
Standard Compliance	IEEE802.11ac (Draft 2.0) /n/a/g/b
Transmission Method	Direct Sequence Spread Spectrum (DSSS), OFDM, MIMO
Frequency Range	Available frequencies depend on the country of purchase. See the next page for details.
Transmission Rate 802.11ac (Draft)	802.11ac (Draft): 20 MHz BW (Long GI) 260, 234, 195, 175.5, 156, 117, 78, 58.5, 39, 19.5 Mbps (3 stream) 156, 130, 117, 104, 78, 52, 39, 26, 13 Mbps (2 stream) 78, 65, 58.5, 52, 39, 26, 19.5, 13, 6.5 Mbps (1 stream) 20 MHz BW (Short GI) 288.9, 260, 216.7, 195, 173.3, 130, 86.7, 65, 43.3, 21.7 Mbps (3 stream) 173.3, 144.4, 130, 115.6, 86.7, 57.8, 43.3, 28.9, 14.4 Mbps (2 stream) 86.7, 72.2, 65, 57.8, 43.3, 28.9, 21.7, 14.4, 7.2 Mbps (1 stream) 40 MHz BW (Long GI) 540, 486, 405, 364.5, 324, 243, 162, 121.5, 81, 40.5 Mbps (3 stream) 360, 324, 270, 243, 216, 162, 108, 81, 54, 27 Mbps (2 stream) 180, 162, 135, 121.5, 108, 81, 54, 40.5, 27, 13.5 Mbps (1 stream) 40 MHz BW (Short GI) 600, 540, 450, 405, 360, 270, 180, 135, 90, 45 Mbps (3 stream) 400, 360, 300, 270, 240, 180, 120, 90, 60, 30 Mbps (2 stream) 200, 180, 150, 135, 120, 90, 60, 45, 30, 15 Mbps (1 stream) 80 MHz BW (Long GI) 1170, 1053, 877.5, 702, 526.5, 351, 263.3, 175.5, 87.8 Mbps (3 stream) 780, 702, 585, 526.5, 468, 351, 234, 175.5, 117, 58.5 Mbps (2 stream) 390, 351, 292.5, 263.3, 234, 175.5, 117, 87.8, 58.5, 29.3 Mbps (1 stream) 80 MHz BW (Short GI) 1300, 1170, 975, 780, 585, 390, 292.5, 195, 97.5 Mbps (3 stream) 866.7, 780, 650, 585, 520, 390, 260, 195, 130, 65 Mbps (2 stream) 433.3, 390, 325, 292.5, 260, 195, 130, 97.5, 65, 32.5 Mbps (1 stream)

Transmission Rate 802.11n/a/b/g	802.11n: 20 MHz BW (Long GI) 195, 175.5, 156, 117, 78, 58.5, 39, 19.5 Mbps (3 stream) 130, 117, 104, 78, 52, 39, 26, 13 Mbps (2 stream) 65, 58.5, 52, 39, 26, 19.5, 13, 6.5 Mbps (1 stream) 20 MHz BW (Short GI) 216.7, 195, 173.3, 130, 86.7, 65, 43.3, 21.7 Mbps (3 stream) 144.4, 130, 115.6, 86.7, 57.8, 43.3, 28.9, 14.4 Mbps (2 stream) 72.2, 65, 57.8, 43.3, 28.9, 21.7, 14.4, 7.2 Mbps (1 stream) 40 MHz BW (Long GI) 405, 364.5, 324, 243, 162, 121.5, 81, 40.5 Mbps (3 stream) 270, 243, 216, 162, 108, 81, 54, 27 Mbps (2 stream) 135, 121.5, 108, 81, 54, 40.5, 27, 13.5 Mbps (1 stream) 40 MHz BW (Short GI) 450, 405, 360, 270, 180, 135, 90, 45 Mbps (3 stream) 300, 270, 240, 180, 120, 90, 60, 30 Mbps (2 stream) 150, 135, 120, 90, 60, 45, 30, 15 Mbps (1 stream) 802.11a/g: 54, 48, 36, 24, 18, 12, 9, 6 Mbps 802.11b: 11, 5.5, 2, 1 Mbps
Access Mode	Infrastructure Mode
Security	AOSS, WPA2-PSK (TKIP/AES), WPA/WPA2 mixed PSK, WPA-PSK (TKIP/AES), 64-bit or 128-bit WEP, Mac Address Filter
USB Interface	
Interface	USB 2.0
Connector Type	Type A (plug)
Compliance	5.0 V 500 mA (max 1000 mA)
Other	
Power Supply	External AC 100-240 V Universal, 50/60 Hz
Power Consumption	About 13.2 W (Max)
Dimensions	212.2 x 183.2 x 34 mm (8.4 x 7.2 x 1.3 in.)
Weight	510 g (18 oz.)
Operating Environment	0 - 40° C (32 - 104° F), 20 - 80% (non-condensing)

802.11a Frequency Range

USA	5180-5240 MHz (Channels 36, 40, 44, 48)
Canada	5745-5825 MHz (Channels 149, 153, 157, 161, 165)

802.11g Frequency Range

USA	2412-2462 MHz (Channels 1, 2, 3, 4, 5, 6, 7, 8, 9, 10, 11)
Canada	

Appendix B - Environmental Information

- The equipment that you have purchased has required the extraction and use of natural resources for its production.
- The equipment may contain hazardous substances that could impact health and the environment.
- In order to avoid the dissemination of those substances in our environment and to diminish the pressure on the natural resources, we encourage you to use the appropriate take-back systems.
- The take-back systems will reuse or recycle most of the materials of your end life equipment in a sound way.
- The crossed-out wheeled bin symbol invites you to use those systems.

- If you need more information on collection, reuse, and recycling systems, please contact your local or regional waste administration.

Appendix C - GPL Information

The source code for Buffalo products that use GPL code is available at <http://opensource.buffalo.jp/>.
